                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 4, Al

The present sequence represents the human anti-tissue factor heavy chain variable region from an antibody that binds native human tissue factor (TF) and does not bind non-native TF. The antibody capable of specifically-binding-native TF. may, be used for inhibiting-blood coagulation and also for reducing-TF-levels in a mammal. The antibodies coagulation and also for reducing-TF-levels in a mammal. The antibodies restences to the thromboses-particularly to prevent or inhibit restences. Or other thromboses-particularly coprevent or inhibit settences as a treatial or cardiac surgery (e.g. angloplasty, endarterectomy, deployment of a stent, use of catheter, graft implantation or use of an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New antibody to human tissue factor - used for, e.g. treating thrombosis or restenosis or thromboembolic conditions associated with cardiovascular, infectious or neoplastic disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; anti-tissue factor light chain variable region; H36.D2.B7; anti-tissue factor heavy chain variable region; inhibition; antibody; blood coagulation; thrombosis; restenosis; thromboembolic condition; cardiovascular; infection; neoplastic disease; clot; diagnosis.

arteriovenous shunt). The antibodies can also be used as a carrier for drugs, particularly pharmaceuticals targeted for interaction with a blood clot such as streptokinase, tissue plasminogen activator (t-PA) or urokinase, or a cytotoxic agent by conjugating a suitable toxin to the antibody. Further the antibodies can be used for treating a thromboembolic condition associated with cardiovascular disease, an infectious disease, a neoplastic disease or as a thrombombolytic agent. The antibodies can also be used for detection and diagnosis

        H36.D2.B7 (ATCC HB-12255). The invention relates to antibodies, especially humanized H36.D2.B7, that provide superior anticoagulant activity by binding native human TF with high affinity and specificity. The antibodies bind human TF, either alone or present in a TF:Factor VIIa complex, effectively preventing Factor X (or Factor IX) binding to TF or the complex, and thereby reducing blood coagulation. The humanized antibodies are useful for inhibiting blood coagulation or blood clot formation, anglogenesis, tumour metastases or inflammation in a mammal. They are also useful as drug carriers, as cytotxic agents, for reducing TF levels in mammals, and for in vivo diagnosis
                                                                                                                                                                                                                                                                    anti-recombinant human tissue factor (TF) murine antibody

The present sequence is the protein sequence of the heavy chain variable region (VH) of anti-recombinant human tissue factor (TF) mouse-human chimeric antibody cH36. This sequence has been humanized in a series of steps (see ABR42719-34) to provide a humanized VH sequence for use in the production of an anti-human TF humanized antibody. Humanized antibodies of the invention provide superior anticoagulant activity by binding native human TF with high affinity and specificity. The antibodies bind human TF, either alone or present in a TF:Factor VIIa complex, effectively preventing Factor X (or Factor IX) binding to TF or the complex, and thereby reducing blood coagulation. The humanized antibodies are useful for inhibiting blood coagulation or blood clot formation, and inhibiting blood coagulation or blood clot formation, also useful as drug carriers, as cytotoxic agents, for reducing TF levels in mammals, and for in vivo diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       murine; mouse; humanised antibody; variable domain; framework region; FR; huFR; immune system molecule; H36.D2.B7; anti-tissue factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        EIQLQQSGPELVKPGASVQVSCKTXGYSFTDYNVYWVRQSHGKSLEWIGYIDPYNGITIY 60
New humanized antibody that binds specifically to human tissue factor, useful for in vivo diagnostic methods, or for inhibiting blood coagulation or blood clot formation, angiogenesis, tumor metastases or inflammation in a mammal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DQNFKGKATLTVDKSSTTAFMHLNSLTSDDSAVYFCARDVTTALDFWGQGTTLTVSS 117

This invention relates to a novel method for producing a humanised antibody variable (V) domain or its fragment by optimising sequence similarity between individual antibody framework regions (FRB) in order CC similarity between individual antibody framework regions (FRB) in order to identify suitable human FRS (huFRB). Specifically, it refers to novel immune system molecules i.e. humanised anonoclonal antibodies that exhibit suitable binding affinity with reduced immunogenicity in humans. The present invention describes a method of mutagenising DNA of non-human FRB CC substantially identical to the selected human FR previously identified controlly sequence similarity searching. As such, this method provides CC humanised light or heavy chain V domains of the sequence huRRI-CDRI-huFR2 CDR2-huFR3-CDR3-huFR4, which can be used as therapeutic or diagnostic controlly incomined or diagnostic controlly incomined the number of best fit possibilities that CC an be generated and provides a rational basis for assembling nearly all humanised immune system molecules of interest. This polypeptide sequence CC is a mutrine anti-tissue factor heavy chain antibody H36.D2.B7 protein of
regions to help identify human framework regions suitable for making the

                                                                                                                                                                                                                                                                                                                   emptic shock syndrome in a manual, involving administering to the mammal and deeb not substantially bind non-native tissue factor. Where the factor x binding to the complex is inhibited and the administration is sufficient to prevent or treat the septic shock syndrome in the mammal. In (M1), the antibody has the binding specificity for native human tissue factor about equal to or greater than H36.D2.B7 (ATCC HB-12255), and is a monoclonal chimeric antibody. An antibody of the invention has antibacterial and immunosuppressive activity, and acts as an inhibitor of binding persent sequence represents the heavy chain variable region of the murine antibody of the invention, H36.D2.B7 (ATCC HB-12255).
                                                                                                                                                                            Treating or preventing septic shock syndrome in mammal, involves administering antibody that binds native human tissue factor and does not substantially bind non-native tissue factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 EIQLQQSGPELVKPGASVQVSCKTXGYSFTDYNVYWVRQSHGKSLEWIGYIDPYNGITIY 60
                                                                                                                                                                                                                                                                                                       The invention relates to a novel method for treating or preventing (M1)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 DONFKGKATLITVDKSSTTAFMHLNSLTSDDSAVYFCARDVTTALDFWGQGTTLIVSS 117

The invention relates to preventing or treating a sepsis or inflammatory disease in a mammal comprising administering to the mammal a therapeutic disease in a mammal comprising administering to the mammal a therapeutic amount of at least one humanized antibody, chimeric antibody, or their fragment that binds specifically to tissue factor (TF) to form a complex, where factor X or IX binding to the complex is inhibited and the complex, administration prevents or treats the sepsis in the mammal. Also included are a kit for performing the above method and reducing an inflammatory cytokine production in a mammal. The inflammatory disease is associated are hirtis (preferably rheumatoid arthritis), glomerulonophritis, multiple sclerosis, psoriasis, Sjogren's syndrome, or inflammatory bowel disease. The method also treats or prevents a sepsis-related condition in a mammal, where the sepsis-related condition is an amammal, where the sepsis-related condition is an amammal, where the sepsis-related condition (s spois-related condition) or sepsis-related condition (c real disorder. The lung injury is acute lung injury (ALI) or acute c respiratory distress syndrome (ARDS). The sepsis-associated renal disorder the acute tubular necrosis. The methods and kit are useful for preventing or treating sepsis or sepsis-related conditions (e.g. DIC or anemia) or inflammatory diseases (e.g. arthritis). The humanized anemia or inflammatory diseases (e.g. arthritis). The humanized conthe chimeric antibody cuis which comprises the light and heavy chain variable regions (VL or VH) of an anti-TF antibody (sused to the human IgG4 heavy and kappa light constant regions. The CDRs (complementarity determining region) and FRS (framework regions) are then the humanized. The presente sequence represente the light or heavy chain without will be not be humanized. The presente the light by or heavy chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9

```
The inversion relates to an antibody (I) that binds native human tissue factor and does not substantially bind non-native tissue factor. Also described: (1) an isolated nucleic acid (II) comprising a sequence encoding at least a portion of an antibody that binds native human tissue factor; (2) a recombinant vector (IV) comprising (II), where (IV) can express at least a portion of an antibody that binds native human tissue factor; (3) a host cell (V) comprising (IV); (4) inhibiting (MI) blood coagulation in a mammal by administering the antibody where the antibody complexes with native tissue factor and factor X binding to the complex is inhibited; (5) reducing (M2) tissue factor levels in a mammal by administering the antibody cowalently linked to a cell toxin or to an effector molecule to provide complement-fixing ability and antibody dependent cell-mediated cytotoxicity, where the antibody contacts cells axpressing the sample with the antibody (I), where the antibody is and (6) detecting (M3) tissue factor levels in a mammal; and (6) detecting the sample with the antibody (I), where the antibody is contacting the sample with the antibody (I), where the antibody is monoclonal. (I) is useful for inhibiting blood coagulation in a mammal (preferrably human), for reducing tissue factor levels in a mammal, contacting tissue factor in a biological sample. (I) can be used in the treatment of a thromboembolic condition associated with cardinatise factor and decoration as thrombosis and restenosis. The antibodies of the invention (especially H36.D2.B7 (secreted by hybridoma ATCC HB-12255)) bind strongly to a conformation of factor X to its activated form factor has the present sequence represents the H36.D2.B7 anti-tissue factor heaver.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                invention relates to an antibody (I) that binds native human tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Antibodies binding to native human tissue factor without substantial binding to non-native tissue factor, useful for inhibiting blood
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                coagulation, for reducing tissue factor, useful for inhibiting blood detecting tissue factor levels in a mammal, and for detecting tissue factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match 99.8%; Score 616; DB 9; Length 11 Best Local Similarity 100.0%; Pred. The present sequence is the protein sequence of a humanized version, HC-01, of the heavy chain variable region (VH) of anti-recombinant human tissue factor (TF) mouse-human chimeric antibody cH36. A series of PCR mutagenesis steps was used to introduce mutations into the cH36 sequence to fully humanize the VH region (see ABR42719-31) and hence for the production of an anti-human TF humanized antibody. Humanized antibodies of the invention provide superior anticoagulant activity by binding native human TF with high affinity and specificity. The antibodies bind human TF, either alone or present in a TF:Ractor VIIa complex, effectively preventing Factor X (or Factor IX) binding to TF or the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New humanized antibody that binds specifically to human tissue factor, useful for in vivo diagnostic methods, or for inhibiting blood coagulation or blood clot formation, angiogenesis, tumor metastases or

complex, and thereby reducing blood coagulation. The humanized antibodies are useful for inhibiting blood coagulation or blood clot formation, anglogenesis, tumnur metastesses or infilammation in a mammal. They are also useful as drug carriers, as cytotoxic agents, for reducing TF levels in mammals, and for in vivo diagnosis

The present sequence is the protein sequence of a humanized version, HC-
02, of the heavy chain variable region (VH) of anti-recombinant human
11ssue factor (FF) mouse-human chimeric antibody CH36. A series of PCR
mutagenesis steps was used to introduce mutations into the CH36 sequence
12 to fully humanize the VH region (see ABR42719-31) and hence for the
13 production of an anti-human FF humanized antibodie antibodies
14 of the invention provide superior anticoagulant activity by binding
15 cative human TF with high affinity and specificity. The antibodies bind
16 numan TF, either alone or present in a TF:Rector VIIs complex,
17 effectively preventing Factor X (or Factor IX) binding to TF or the
18 complex, and thereby reducing blood coagulation. The humanized antibodies
18 are useful for inhibiting blood coagulation or blood clot formation,
29 are useful so inhibiting so are inflammation in a mammal. They are
20 also useful as drug carriers, as cytotoxic agents, for reducing TF levels
20 in mammals, and for in vivo diagnosis

Anti-tissue factor humanized antibody VH region HC-04.

(first entry)

26-AUG-2003

ABR42722:

```
The present sequence is the protein sequence of a humanized version, HC-
103. of the heavy chain variable region (VH) of anti-recombinant human
tissue factor (TF) mouse-human chimeric antibody CH36. A series of PCR
mutagenesis steps was used tro introduce mutations into the CH36 sequence
to fully humanize the VH region (see ABR42719-31) and hence for the
production of an anti-human TF humanized antibody. Humanized antibodies
of the invention provide superior anticoagulant activity by binding
native human TF with high affinity and specificity. The antibodies bind
numan TF, either alone or present in a TF:Factor VIIa complex,
effectively preventing Factor X (or Factor IX) binding to TF or the
complex, and thereby reducing blood coagulation. The humanized antibodies
are useful for inhibiting blood coagulation or blood clot formation,
angiogenesis, tumour metaetases or inflammation in a mammal. They are
also useful as drug carriers, as cyctoxic agents, for reducing TF levels
in mammals, and for in vivo diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New humanized antibody that binds specifically to human tissue factor, useful for in vivo diagnostic methods, or for inhibiting blood coagulation or blood clot formation, angiogenesis, tumor metastases or

The present sequence is the protein sequence of a humanized version, HC-d4, of the heavy chain variable region (WH) of anti-recombinant human tissue factor (TF) mouse-human chimeric antibody cH36. A series of PCR mutagenesis steps was used to introduce mutations into the CH36 sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New humanized antibody that binds specifically to human tissue factor, useful for in vivo diagnostic methods, or for inhibiting blood coagulation or blood clot formation, anglogenesis, tumor metastases or

                   production of an anti-human TF humanized antibody. Humanized antibodies of the invention provide superior anticoagulant activity by binding native human TF with high affinity and specificity. The antibodies bind human TF, either alone or present in a FFFEctor VIIa complex, effectively preventing Factor X (or Factor IX) binding to TF or the complex, and thereby reducing blood coagulation. The humanized antibodies are useful for inhibiting blood coagulation or blood clot formation, angiogenesis, tumour metastases or inflammation in a mammal. They are also useful as drug carriers, as cytocoxic agents, for reducing TF levels in mammals, and for in vivo diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9

05, of the heavy chain variable region (VH) of anti-recombinant human
citisue factor (FF) mouse-human chimeric antibody cH36. A series of PCR
mutagenesis steps was used to introduce mutations into the cH36 sequence
to fully humanize the VH region (see ABR42719-31) and hence for the
production of an anti-human FF humanized antibodise of the invention provide superior anticoagulant activity by binding
native human TF with high affinity and specificity. The antibodies bind
native human TF, either alone or present in a TF-Fractor VIIs complex,
effectively preventing Factor X (or Factor IX) binding to TF or the
complex, and thereby reducing blood coagulation. The humanized antibodies
are useful for inhibiting blood coagulation or blood clot formation,
are useful to inhibiting blood coagulation or blood clot formation,
angiquenesis, tumour metastases or inflammation in a mammal. They are
the mammals, and for in vivo diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   EIQLQQSGPELVKPGASVQVSCKTXGYSFTDYNVYWVRQSHGKSLEWIGYIDPYNGITIY 60

```

```
The present sequence is the protein sequence of a humanized version, HC-
CO 9, of the heavy chain variable region (VH) of anti-recombinant human
tissue factor (TF) mouse-human chimeric antibody CH36. A series of PCR
mutagenesis steps was used to introduce mutations into the cH36 sequence
to fully humanize the VH region (see ABR42719-31) and hence for the
production of an anti-human TF humanized antibody. Humanized antibodies
of the invention provide superior anticosquiant activity by binding
native human TF with high affinity and specificity. The antibodies bind
numan TF, either alone or present in a TF:Ractor VIIa complex,
effectively preventing Factor X (or Factor IX) binding to TF or the
complex, and thereby reducing blood coagulation. The humanized antibodies
are useful for inhibiting blood coagulation or blood clot formation,
are useful so timbuse the mammal of the mammal. They are
also useful as drug carriers, as cytotoxic agents, for reducing TF levels
in mammals, and for in vivo diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 QIQLVQSGPELVKPGASVRVSCKASGYSFTDYNVYWVRQSPGKGLEWIGYIDPYNGITIY

The present sequence is the protein sequence of a humanized version, HC10, of the heavy chain variable region (WH) of anti-recombinant human
10, of the heavy chain variable region (WH) of anti-recombinant human
10, of the heavy chain variable region (WH) of anti-recombinant human
10, of the invention provide superior anticode mitabody when care for the
11 production of an anti-human TF humanized antibody. Mumanized antibodies
12 production of an anti-human TF humanized antibodies
13 cative human TF with high affinity and specificity. The antibodies bind
14 human TF, either alone or present in a TF:Factor VIIa complex,
15 caffectively preventing Factor X (or Factor IX) binding to TF or the
16 complex, and thereby reducing blood coagulation. The humanized antibodies
16 are useful for inhibiting blood coagulation or blood clot formation,
17 cangiogenesis tumour metastases or inflammation in a mammal. They are
18 also useful as drug carriers, as Cytotoxic agents, for reducing TF levels
18 in mammals, and for in vivo diagnosis

A;Title: Structural basis of stimulatory anti-idiotypic antibodies.
A;Recession: PL0011; MUD: 88142863; PMID: 3125424
A;Accession: PL0011; MUD: 88142863; PMID: 3125424
A;Accession: PL0011
A;Molecule type: mRNA
A;Recences: UNPARC:UPI0000176D36
A;Experimental source: cell line 4C11
C;Comment: This protein is an anti-idiotypic antibody that induces an anti-phosphorylcha
C;Superfamily: immunoglobulin V region; immunoglobulin Negion 4C11 #status predicted <MAT>

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 2, And Sequence 6, Application of Applicat
